Very good points Kwok Wai Yau.

I dearly appreciate the fact that you made references to both Gartner and the World Economic Forum. Both are very reputable sources. Overall, very good article.

I have a quick question. Your article mostly deals with computers connected to the internet. What sort of risks are there with computers that are not connected to the internet? (I know some companies force certain machines to be offline-only terminals to reduce risk).

Kind regards  
Demian
